Ginger and Cologne in Boszo Class Topeka, Kan.-Jamaica ginger was ed under the ban in Kansas when placed under the ban in Kanaas when the State Supreme Court held that it is intoxicating, and that a druggist who sells it may be prosecuted for vio-dation of the prohibitory law. The court also held that lemon and vanilla

extracts, cologne, camphor and similar finctures, extracts and essences, if they actually make a man drunk, are to be classed as intoxicating liquors

Legislate Against Women's Dress. Atlantic City, N. J.-Condemning the so-called feminist movement "because it not only pushed women for ward into the vocations and activities of men, but encourages them to imitate their voice and manners and can-sot fall to have a deleterious effect apon the public welfare," Dr. Frank C. Richardson of the Boston university, speaking before the convention of the American Institute of Home opathy, declared the hope of America lies in a "renaissance of home-life and the awakening of women to the grandeur of her mission as a mother.

NEW MEXICO STATE FAIR.

Second Edition of Premium Necessary This Year.

Albuquerque.-For the first time in tory of the New Mexico state fair at Albuquerque, a second edition of the fair premium book has been made necessary. The premium books were issued early this year. The lists carry a total of more than \$4,000 in cash prizes for agricultural and live best year on record on both farm and ranch, the demand from prospective exhibitors has been enormous. The new edition is now being printed and Hecretary Tom Binkert at Albuquerque announces that those who desire the book should make application at

The fair commission is gratified at the state-wide spirit of co-operation shown this year. Every section of the state is showing lively interest in the coses of the fair and especially in the exhibit departments. Fourteen county and local fairs to date have fixed their fair dates just prior to the state fair. Oct. 5 to 10, so that the pick of exhibits at the local fairs may be taken to the state exposition, and the number of individual exhibits will the largest agricultural exhibit ever double that of any previous year. held in the state was at Albuquerque in connection with the national irrigation congress. The state fair exhibit exhibit both in size and character of

VELLOWSTONE PARK SHORT CUT.

Final Survey of the Buffalo-Hazelton

Road Nearing Completion. Denver.—The forest service has crew at work making final survey of the Buffalo-Hazelton road, preparatory to completing construction work begun last summer. This strip of road, erossing the Big Horn national forest, forms an important link in the Black and Yellow trail leading from Belle Fourche, South Dakota, through Bundance, Moorcroft, Gillette, Buffalo, Hazelton, Hyattville, Basin, and Cody to the east entrance of the Yellowstone national nark

According to forestry officials, the completion of the Buffalo-Hazelton nity, "are my feet." road comprises one of the most important road projects in the national forests of the west. The successful outcome of the Black and Yellow trail ts said to have depended to a great extent upon this stretch of road, leading as it does across the Big Horn ntains, and the work accomplished tast year fully demonstrates the feasibility of the route. With the completion of the work this year, the Black and Yellow trail will be placed on the

map. Not only will the advantages of this road be felt along the route of the Black and Yellow trail, but by tourists from Colorado points as well. The Denver National Parks trail conwith the Black and Yellow trail at Buffale and persons desiring a short cut to the park will have access the Buffalo-Haselton road across the Big Horn mountains in preference of going around by Billings.

Sinta Fé.—The combines parents and less association report for the state of New Mexico covering the period from January 1 to June 30, 1976, has been compiled by Chief Clerk Walter L. Kegel, of the traveling suditor's tor L. Kegel, of the traveling suditor's ter L. Kegel, of the traveling auditor's office. It shows total resources of \$1,514,530.57 compared to \$1,518,741.18 of the six months previous. The report shows total liabilities of \$1,514,530.57 for the last six menths compared to \$1,519,741.18 for the period between \$1,519,741.18 for the period between July 1 and December 31, 1913.

The state bank report compiled by Chief Clerk Kegel for the first six months of 1914, shows that the banks have had a prosperous year so far with an increase of business estimated at 10 per cent. On June 30 these banks throughout New Mexico had resourced amounting to \$9,308,239,34 as com pared with \$8,434,531.53 at the close of business on December 31, 1913. The were \$6,694,718.40 as compared with \$5.701.338.57 six months before. The individual deposits subject to check without notice had increased from \$3,-669,265.14 to \$4,469,141.85 or to \$12 for each man, woman and child in the

There were 5,991 saving depositors who had \$783,314.52 on deposit, and 16.311 other depositors

Government to Spend Half Million. Las Cruces.-It now looks as if from \$500,000 to \$600,000 would be expended by the government in the Me-This money has been ready for some time to start the construction of the distributing canal system under the Elephant Butte project, and it is understood Project Manager Lawson has all obstacles out of the way and will start dirt flying as soon as the contracts are signed by the water users. The requisite number of signatures will be obtained in few weeks, it is

To Ship Fifty Car Loads of Peaches. Farmington.-There is now no doubt that Foley brothers of this place will be able to carry out their intention of filling an order for fifty car loads of peaches from the Farmington district -a rather striking proof of the importance and possibilities of the San Juan fruit country. This will bring in \$15. 000 for local growers in the middle of the fruit season.

Slain Man Found in Woman's Home Albuquerque.-J. W. Reed, an Angora goat breeder in the Guadalupe mountains, forty miles southwest of Carlsbad, was killed, and Mrs. A. M. Brown, wife of a mountaineer, was lodged in jail in Carlsbad in connection with the killing. Reed was found dead on the floor of the Brown woman's home. He had been shot through

Bix Crops of Alfalfa This Beason.

Roswell.—Meldrum Gray has a one-rear-old alfalfa field that has so far year-out this season made three cuttings, and he is sure that it will make six good cuttings this year, each time yields a ton and a little ever to the acre.

deficient in protein farmers should make a careful investigation of the sources from which it can best be sup-pited. Alfaits and nifnifa hay are excellent for breeding and growing stock, but are too bulky for fattening ity available for the other necess nutrients. Bran has the same faults as a fattening feed. Middlings and shorts may be used if the price is not too much above that of the grains fed and the distance of hauling is not too

from Manchuria and may become cheap enough for supplementary use. Cotton seed meal is richer in protein than either of these, but because of its poisonous effects when fed for long periods should never be used as pig feed for more than forty-two days.

Tankage, a by-product of the meat industry, is admirably adapted to hog feeding and is likely to long remain the cheapest and most satisfactory source of supplemental protein for

FECUNDITY OF POLAND-CHINA

Figures Compiled From Records She Number of Pige in Litters in Various Years.

Rommel has compiled from records of the Poland-China and Duroc-Jersey associations a fund of figures showing the fecundity of such a great number of sows of these breeds as to make their summing up thoroughly representative. Observations of 14,703 Po-land-China litters in the five years, 1882-86 inclusive, disclosed an average of 7.04 pigs per litter. Observa-

tions of 39,812 litters of the same breed in the years 1898-1902, showed an average of 7.52 pigs. This was an increase in the latter five years of .48, or nearly one-half pig per litter, a percentage of 6.81. From 1893 to 1897, inclusive, 3,762 Duroc-Jersey sows averaged 9.22 pigs each. From 1898 to sows averaged 9.27 pigs each, or an increase of .054 per cent. Of the more than 76,000 sows of both breeds reported as under observation one Poland-China farrowed 20 pige and two Duroc-Jerseys a like number.-From Coburn's "Swine in America."

CONFORMATION OF GOOD RAM

in General Appearance Look for Ani-mai With Bright Eye, Bold Action and Graceful Carriage.

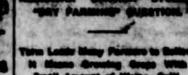

In conformation and general appearance the ram should have a short, wide face with a large muzzle, good width across the shoulders and deep well developed chest, which indicate strong constitution and energy. Deep wide shoulders indicate good mutton form. The hind quarters should be well developed and proportionately as large as the forequarters, says a writer in an exchange The legs should be well set, one at each corner, well boned, covered with good muscular development. A ram that has short legs and a medium compact form is always preferable to a rangy one. A leggy ram will work havoc in any flock. In general appearance look for a ram that has a bright eye, bold and courageous actions and graceful carriage. In disposition he should be active, fearless and bold. While it is unpleasant to handle vicious rams yet I much prefer one of this disposition to one that is quiet and lifeless. As a general rule the ram that feels that he is master of his flock is more robust and possesses great prepetency.

Care of Breed Sowe.

Hogs require attention, regardless of condition, age or sex, but the management of the brood abw is the surset test of the breeder's skill. If sows are carelessip fed during pregnancy, trouble of some kind is sure to ensue at farrowing.

Rest and Refreshment.

Let the horse have a chance to rol as often as possible; it will rest and refresh him. Give him a little clean earth or a piece of sod to eat now and then; he craves it, and it is good for his stomach had blook.

for a number of years expe have been conducted with a view of learning as much as possible about the movement of water in the soil, how to conserve it for the use of from one year to another. In other words, this station has been studying what has come to be referred to as 'dry farming."

The term "dry farming" is a misne mer to some extent. It has led many farmers to suppose that it represent growing crops without moisture, or rather with a small amount, which it does not. Crops grown in the semi-arid regions need just as much water in fact, they need more because o the drying winds that prevail which increase transpiration, that is the ex-halation of moisture by the plants. Summer fallowing, that is cultivation of the soil at intervals of one to two weeks during the summer sees the principle made use of in the drier sections of our territory to conserve moisture. Some farmers have assumed, it seems, that frequent cultivation of the soil during the summer season increases in some mysterious way the amount of water in that soil. but this is a mistake. There is only one way of increasing the water content of a soil and that is by rain. What surface cultivation can do, and does do, is to prevent the water in the soil from escaping into the atmosbers. It is impossible to conserve all the moisture of a season by surface cultivation but a certain percentage of it can be stored in the soil through

The substation at North Platte ound that during a series of years they were able to store from 10 to 33 per cent of a season's rainfall by cultivating frequently enough to keep the surface three or four inches of soil loose, and by preventing weed growth. In other words, from a 15-inch season's rainfall they were able to store and retain in the soil for the use of crops the succeeding year about five inches, but sometimes not more than 1.5 inches, or ten per cent of the total rainfall. The variation in the amount of water stored in differ ent years was found to depend upon a number of conditions. In order to re tain as much of that water as possible the surface must be broken up with a disk or harrow or other suitable pulverising implement immediately after

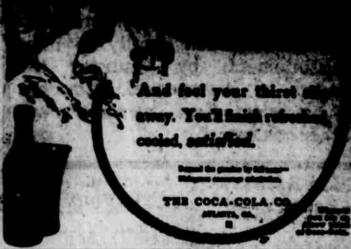

Since the mulch has to be from three to four inches deep it ca ly be seen that the moisture in only about two inches of this soil can be conserved, because that stored in the top mulch is lost in a very few days. Then, too, a very dry soil does not absorb moisture so readily as a wet

According to the Nebraska investigations, such crops as spring wheat oats, barley and corn draw their mois ture supply from a soil depth of only four inches, whereas winter wheat which has a longer period of growth, and therefore attains greater root development, draws moisture from the soil to a depth of six and seven inches. Legumes, by reason of their being deep-rooted plants, draw moisture from still greater depths; and alfalfa. the deepest-rooted agricultural plant we have, frequently draws moisture from a depth of 20 to 30 feet below the surface. This is one of the main ree sons why alfalfa is such a valuable crop in semi-arid sections. Once alfaifa is thoroughly established it is practically certain to produce some thing even under very adverse con-ditions in semi-arid sections.

Mulch for Potatoes. Irish potatoes grown under a mulch produced about forty-five cent more than the same acreage given ordinary culture at the Nebraska experiment station. The mulch was four to five inches of straw of any kind or hay or leaves. Of course, no cultivation what-ever was given. The mulching of these potatoes cost less than would the cultivation, yet the mulching heavily in-creased the yield.

Drought Resistant Crop. Rape resists drought fairly wall, bu se a rule it is best to sow seed early enough to get the plants well started before dry weather sets in, as during a long dry period the plants are often attacked by a kind of plant fouse which causes them to will and become valuelees as a ferale.

The early preparation of the soil onserves moisture, develops plant cod, kills weeds and destroys insects.

agerie in Central park, New York mitted suicide in the presence of a large number of specialors a few days ago. Mr. Snyder, the head keep or, says that the animal recently stopped taking food, and in other ways showed signs of remorse at hav ing strangled its mate. The other morning Bob climbed to the top o the rocky ledge in the rear of the dea and deliberately threw himself backward to the asphalt flooring below, a distance of 20 feet. He broke his neck and died in a few minutes.

ECZEMA ITCHED AND BURNED

R. F. D. No. 4, Box 55, Hollas Mich.—'My child's trouble began by getting red and sore around her neck, and her face, behind her ears, under her arms, and different parts of her body were affected. The ecsema appeared in a rash first. It was wet and looked as if it was sweaty. It and looked as if it was sweaty. It compounded by our Coulists—so a "Past compounded by our Coulists—so a "Past could not sleep or rest. It got so bad at last that behind her ears was one great or sore so that I had to cut her Murine Eye Shive in Applie Tall State of the Eye Francisc or the Eye Francisc Ordinated Francisco Company, Chicago. A hair. There was a hard crust cover ing her neck. She could not have her clothes buttoned at all. I could hardly change her clothes. It caused an aw ful difigurement for the time. She would cry when I had to wash her.

"We had her treated for some tim but without success. I got one cake of Cuticura Soap and one box of Cuticura Cintment and I had not used more than half of what I bought when she was all cured." (Signed) Mrs. G. C. Riemerema, Mar. 21, 1914 Cuticura Soap and Ointment sold
